

A-type layer equipment

Clever design of cage mesh

Make more profits

Comfortable feeding environment

Low price and best quality

Saving chicken feed

Apply to different chicken house

Reduce egg broken rate

AUTHORIED DEALER IN INDONESIA
PT. SINAR MUSTIKA RAYA

Jl. Daan Mogot KM. 21, Pergudangan Arcadia Nlok G15/12,

A-TYPE LAYER EQUIPMENT

TECHNICAL NOTE

- ◆ Corrosion-resistant materials for breeding
- ◆ The cage mesh is made of zinc-aluminum alloy steel wire medium frequency DC welding process, and the corrosion resistance of the products made by this material and process is 5-10 times that of ordinary galvanized steel wire.
- ◆ Zinc-aluminum alloy steel wire has superb corrosion resistance, self-repairing ability and ductility and deformation ability, tensile strength in 700-900MPA.

- ◆ The mesh weld joints welded by the medium frequency DC welding process are smooth and burr-free. It will not damage chickens and eggs.
- ◆ The frame legs and sheet metal parts are made of 275g high zinc plate by cold rolling process, this material and process is often used in the construction of ships, automobiles and skyscrapers. High corrosion resistance, high rigidity and extreme stability. The service life is more than 20 years.
- ◆ The slope of the bottom net is 8° golden slope, which is the best slope for the egg to roll. The bottom net with this slope has a 0% egg breaking rate.

A type layer chicken cage size

Cage parameters	1960*460	1960*380	1500*500
Cage length/mm	1960	1960	1500
Cage depth/mm	460	380	500
Cage height/mm	410	410	440
Area per bird(cm ² /bird)	450.8	496.53	500
Cells cage	5	5	3
Birds number of cell cage	4	3	5

- ◆ The bottom net is equipped with a number of stiffeners, which ensures that the bottom net is firm and at the same time, the bottom net will produce a trampoline effect, bring a comfortable foot feeling to the chickens, and significantly improve the efficiency of egg production.
- ◆ The feed reflux device is designed at both ends of the trough, which can return the residual material from the edge to the trough and save feed.
- ◆ Large size PVC feed trough to ensure chicken nutrition. Keeps every chicken can eat well.
Equipped with a fully automatic egg picking device to reduce contact with eggs and minimize the egg breaking rate.

OUR ADVANTAGES

Fully automatic cage system

Automatic crane feeding system
automatic egg collection system
automatic manure cleaning system
automatic environmental control system

Convenient operation

The investment is lower than that of H-type cage equipment, which is simple to operate and easy to use.

Strong applicability

It is suitable for different forms of chicken houses, closed chicken houses, semi-open chicken houses, fully open chicken houses, etc.

Higher profits

Ultra-low power consumption, ultra-low egg breaking rate, ultra-low labor cost, higher breeding income.
